Major Fruit Crops Quarterly Bulletin is a publication of the Philippine Statistics Authority. The PSA reserves exclusive right to reproduce this publication in whatever form. Should any portion of this publication be included in a report/article, the title of the publication and the PSA should be cited as the source of data. The PSA will not be responsible for any information derived from the processing of data contained in this bulletin.

FOREWORD

The *Major Fruit Crops Quarterly Bulletin* provides updates on production of banana, calamansi, mango, and pineapple. These crops are highlighted in the report on the Performance of Agriculture that the Philippine Statistics Authority (PSA) releases quarterly.

This third quarter 2018 issue of the Bulletin presents the final estimates of production from April to June 2018 and the preliminary estimates from July to September 2018. It also contains the final estimates on area planted and number of bearing trees/hills for the period January to June 2018. The main source of data is the Crops Production Survey (CrPS) conducted quarterly by PSA.

BACKGROUND¹

Scope and Coverage

The Crops Production Survey (CrPS) is for all crops other than palay and corn. Around 282 crops are covered by this survey. For this bulletin, information on four major fruit crops are reported. These fruit crops are banana, calamansi, mango and pineapple.

Estimates of production, area planted/harvested, and number of bearing trees/hills are generated from the (CrPS) which has four survey rounds in a year, that is, February, May, August, and November.

Crops statistics covers all regions excluding National Capital Region (NCR).

Sampling Methodology

A non-probability survey is employed for the CrPS. A “5 by 5” design was used in the selection of samples, with the province as survey domain. The top five producing municipalities of a certain crop are chosen from each province. From each of these municipalities, five sample farmers are selected as respondents. In this two-stage design, municipality serves as the primary sampling unit while farmer-producer is the secondary sampling unit.

Data Collection

For CrPS, data collection is conducted quarterly during the last 10 days of the middle month of the quarter. It gathers data on production, area planted/harvested and number of bearing trees/hills.

Concepts and Definitions

Crop production refers to the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester’s share, reserved, etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.

¹ **Source:** *Excerpts from Crops Statistics of the Philippines 2012-2016; ISSN-2012-0487*
<https://psa.gov.ph/content/crops-statistics-philippines-national-and-regional>

Area planted refers to the actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops. On the other hand, area harvested refers to the actual area from which harvests are realized. This excludes crop area which were totally damaged. It may be smaller than the area planted. In crops statistics, this applies to temporary crops.

Bearing trees/hills refers to trees/hills where harvesting has been made in the past and may or may not have borne fruits (productive) during the reference period due to cyclical production pattern of the crop. Hills applies to banana.

FIGURE 1 Banana Production by Region, July-September: 2018^P

HIGHLIGHTS

Banana

- For the period July to September 2018, banana production reached 2.43 million metric tons, an increase of 2.0 percent from the 2.38 million metric tons production in the same quarter of 2017.
- Davao Region remained the top contributor to the total banana production, sharing 38.2 percent. This was followed by Northern Mindanao with 21.3 percent and SOCCSKSARGEN with 12.5 percent (Figure 2).
- More than a half or 51.2 percent of the total banana production was Cavendish variety, reaching the level of 1.25 million metric tons. Saba variety and Lakatan variety had 28.4 and 10.6 percent share to the total, respectively (Figure 3).

FIGURE 2 Distribution of Banana Production by Region, July-September: 2018^P

FIGURE 3 Distribution of Banana Production by Variety, Philippines, July-September: 2018^P

FIGURE 4 Calamansi Production by Region, July-September: 2018^P

Calamansi

- Calamansi production for the third quarter of 2018 decreased by 2.1 percent, from 54.70 thousand metric tons in the same quarter of 2017 to 53.56 thousand metric tons.
- MIMAROPA Region contributed 53.4 percent to total production, the highest among the regions, followed by CALABARZON with 11.0 percent share and Zamboanga Peninsula with 6.1 percent (Figure 5).

FIGURE 5 Distribution of Calamansi Production by Region, July-September: 2018^P

FIGURE 6 Mango Production by Region, July-September: 2018^P

Mango

- For the third quarter of 2018, mango production was 4.3 percent higher compared to the production in the same period of previous year, from 55.44 thousand metric tons to 57.85 thousand metric tons.
- Central Visayas, with 19.10 thousand metric tons share, was the highest producer of mango during the period, sharing 33.0 percent to national production. Northern Mindanao ranked next with 20.1 percent share and third was Caraga with 12.0 percent share (Figure 7).
- Carabao variety reached 46.46 thousand metric tons during the period, contributing 80.3 percent to total mango production (Figure 8).

FIGURE 7 Distribution of Mango Production by Region, July-September: 2018^P

FIGURE 8 Distribution of Mango Production by Variety, Philippines, July-September: 2018^P

FIGURE 9 Pineapple Production by Region, July-September: 2018^P

Pineapple

- An increment of 3.2 percent in pineapple production was recorded during the period July to September 2018, reaching 705.43 thousand metric tons. It was 21.67 thousand metric ton higher compared with the 2017 level of 683.76 thousand metric tons.
- Northern Mindanao recorded the highest production of 421.87 thousand metric tons, contributing 59.8 percent to the total pineapple production. This was followed by SOCCSKSARGEN with 28.3 percent share and Bicol Region with 7.4 percent (Figure 10).
